Genes were identified by a combination of three methods: Gene prediction programs including GRAIL (ftp://arthur.epm.orn.igo/pub/xgrail), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://arthur.epm.orn.i.gov/pub/xgrail), searches of the (http://www.cbs.dtu.dk/services/NetGene2/), searches of the complete sequence against a peptide database and plant EST databases at TiGR, and manual curations based on those analyses. Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by the most of their length are predicted by the protein or EST similarity. Contact of their length are predicted by the sum of the protein or EST similarity of the protein or EST similarity. The protein of the protein or EST similarity of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are hitch the protein or EST similarity or the protein or EST similarity or the protein or EST similarity. The protein or EST similarity or the protein or EST similarity or the protein or EST similarity. The protein or EST similarity or the protein or EST similarity or the protein or EST similarity. The protein or EST similarity or the protein or EST similarity or the protein or EST similarity.

In addition, we would like to thank the TIGR Bioinformatics Department, especially Lixin Zhou, Hanif Khalak, Michael E. Heaney, Lily Fu, Feng Liang, Jeremy Peterson, Michael Holmes, and Delwood Richardson for software and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted (09-MAR-2000) The Institute for Genomic Research, 9712 Medical Center Dr., Rockville, MD 20850, USA On Dec 17, 1999 this sequence version replaced gi:2642152. The sequence and annotation of chromosome 2 were merged from those of the individual clones on this chromosome after removing overlaps. For detailed information, please see the TIGR web site (http://www.tigr.org/tdb/at/at.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  http://ftp.genome.washington.edu/RM/RepeatMasker.html). Genes are numbered from the top to bottom of the chromosome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats were identified by repeatmasker (Arian Smit,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence and analysis of chromosome 2 of the plant Arabidopsis
Arabidopsis thaliana chromosome II section 214 of 255 of the complete sequence. Sequence from clones T517, AC003000 AE002093
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This work was supported by the National Science Foundation,

Title:

```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                invention. The gene has been designated the parkin gene, and variants of it are implicated in the pathology of Parkinson's disease, and found in parkinson's disease patients. The sequences may be used for the diagnosis, treatment (including gene therapy) and investigation of
             This sequence represents a Leptospira DNA sequence isolated from the pathogenic Leptospira (LS) bacterium of the invention. The bacterium belongs to serogroup Hurstbridge or serovar hurstbridge or the species L. fainei. The LS bacteria can be used for conferring protective immunity against pathogenic LS bacteria in humans or animals. The bacteria can also be used for prophylactic or therapeutic treatment of infections. The DNAs and antibodies may also be used for detection and

complexy and subsequent recognition by Treal receptors is alone
insufficient to activate a robust cytotoxic immune response that can lyse
the tumour cells, immunostimulatory cofactors also being required for
the tumour cells, immunostimulatory cofactors also being required for
cefficient activation of cytotoxic T-lymphocytes (CTLs). Nucleic caid
sequences identified using the SAGE tags have several potential uses.
They may be used in vaccines to induce an immune response, particularly
against a tumour antigen; to modulate the genotype of an APC; to screen
for agents that modulate expression of differentially expressed genes in
an APC; and as hybridisation probes/amplification primers for the
capression of these genes. Detection of the dendritic cell differentially
expressed genes, or of their encoded proteins, can be used to identify
cells as belonging to the monocyte lineage. Cells containing these genes
can be used in active immunotherapy (or to stimulate production of a
population of antigen-specific effector cells) and vectors containing
APC-associated costimulatory factors ensures adequate antigen
are used in gene therapy. Co-administration of tumour antigens and
APC-associated costimulatory factors ensures adequate antigen
bresentation of or costimulatory signals, migration to Tcell-rich sites,
secretion of Tcell growth factors and secretion of chemokines for
recruitment of immune effector cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                          other transcripts correspond to novel genes. Antigen-presenting cell APO, associated costimulatory factors play an important role in the activation of the cytotoxic immune response, particularly against tumour cells. Tumour antigen presentation via the MMC (major histocompatibility complex) and subsequent recognition by T-cell receptors is alone
with monocytes. Some of the transcripts correspond to known genes or ESTs (expressed sequence tags) which were previously unknown to be preferentially or differentially expressed in dendritic cells, while
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell types, of e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antisen-encoding sequence for use in gene or cell-based vaccines; Polypeptides encoded by the transcripts are also useful in vaccines; for diagnoship breast cancer and for raising specific antibodies (Ab). Ab are used to detect the polypeptides or as therapeutic and isolate populations of educated, antisen specific immune effecter cells, c.g. cytotoxic T lymphocytes, and these used for adoptive
                                                                                                                                                                                                                                                                                                                                                                        that are preferentially transcribed in the metastatic breast tumour 153sue (i.e. are upregulated in metastatic breast tumour cells). 283942 to 286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour tissue (i.e. are downregulated in metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic. Diagnosis is by standard immunoassays or hybridisation/amplification reactions.
                                                                                                                                                                                                                                                                                                                                         280767 to 283941 represent tags corresponding to distinct transcripts

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         οy
that are preferentially transcribed in the metastatic breast tumour cells. 283941 represent tags corresponding to distinct transcribts that are preferentially transcribed in metastatic breast tumour cells). 283942 to 286677 represent tags corresponding to distinct transcribts that are preferentially transcribed in the primary or non-metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic biggnosis is by standard immunoasays or hybridisation/amplification reactions. Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell types, of e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antigen-encoding sequence for use in gene or cell-based cancernes Polypeptides encoded by the transcripts are also useful in vaccines; for diagnosing breast cancer and for raising specific antibodies (Ab). Ab are used to detect the polypeptides or as therapeutic genes; cells that produce the polypeptides can be used to expand and isolate populations of educated, antigen-specific immune effecter colls.

that are preferentially transcribed in the metastatic breast tumour cells.

that are preferentially transcribed in the metastatic breast tumour cells.

that are preferentially transcribed in metastatic breast tumour cells). 283942

to 286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic biagnosis is compounds that modulate expression of the transcripts are potentially compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell types, of e.g. therapeutic genes (also ribozymes or antisense sequences).

compounds that an antigen-encoding sequence for use in gene or cell-based particularly an antigen-encoding sequence for use in gene or cell-based cancines; for diagnosing breast cancer and for raising specific antibodies (Ab). Ab are used to detect the polypeptides or as therapeutic and isolate populations of educated, antigen-specific immune effecter cells, e.g. cytotoxic I lymphocytes, and these used for adoptive

                                                                                                                                                                  This invention describes a novel method allowing essential or functional genes to be rapidly identified and inactivated. The method is able to firstly identify most of the essential genes in an organism (1.e. a bacteria or a eukaryote) needed for survival, and secondly it provides for reducing or inactivating their expression. The method is able to diagnostic reagents and therapeutics. The method provides a means for identify functional oligoniclectide molecules able to be used as diagnostic reagents and therapeutics. The method provides a means for identifying essential genes whose sequence is known only as part of a genome with unknown function, as well as a means for identifying concluded to morprising (a) a first reporter gene encoding a nucleic acid molecule comprising (a) a first reporter gene encoding a functional oligonucleotide molecule such as an external guide sequence concoting a second reporter protein, and (c) a targeting gene encoding a encoding a second reporter protein, and (c) a targeting gene encoding a functional oligonucleotide molecule such as an external guide sequence (EGS), a ribozyme or an antisense RNA and targeted to the RNA of interest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                HVR; human; animal; forensic science; paternity testing; diagnosis; animal breeding; hereditary diseases; tumours; allele; loss; chromosomal regions; tumour region identification; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The antisense oligonucleotides are useful in the treatment of tumours in which expression of TGF-beta is of relevance for pathogenicity and/or inhibition of pathological angiogenesis. They are used especially for the treatment of the immunosuppressive effect of TGF-beta, augmentation of the proliferation of cytotoxic lymphocytes, treatment of endogenous hyperexpression of TGF-beta, treatment of endogenous hyperexpression of TGF-beta, treatment of endogenous hyperexpression of TGF-beta, treatment of pressit tumours, treatment and prophylaxis of skin carcinogenesis, and treatment of oesophageal and gastric carcinomas.
                                                                                                                      The sequence is that of a polynucleotide probe which may be used in the detection of new hypervariable regions (HVR) in a DNA sequence. HVR represent a fingerprint useful in e.g. forensic science, paternity testing, animal breading, etc. The probe may be used as part of a method for the efficient detection in humans or other animals, without the use of mini-satellites or primary enrichment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tumour; angiogenesis; breast tumour; neurofibroma; giloma; glioblastoma; carcinogenesis; carcinoma; oesophagus; oesophageal; gastric; gut; immunosuppression; oligonucleotide; ss.

5555×8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes enzymatic nucleic acid molecules with RNA-cleaving activity (e.g. ribozymes) which are capable of modulating the expression of plant genes: (i) involved in biosynthesize to V96334, and alraholds: or (ii) involved in flower formation. V95982 to V96334, and Abirphi ribozymes, respectively. V95629 to V96334, and hairphi ribozymes, respectively. V95629 to V96381, and hairphi ribozymes, respectively. V95629 to V96381, and V96355 to V96734 represent potato solanidine glucosyltransferase target v96355 to V96734 to V9770, and V97711 to V97195 represent potato citrate synthase hammerhead and hairphi ribozymes. respectively. V96735 citrate synthase hammerhead and hairphi ribozymes, respectively. V96735 citrate synthase hammerhead and hairphi ribozymes to respectively. V96735 citrate synthase target to V96772, and V97196 to V97220 represent potato citrate synthase target to V96772, and V97196 to V97220 represent potato citrate synthase target potato but also formato, pepper, aubergine and ditura or to inhibit potato, betto, lettuce, spinach, cabbage, brussel sprouts, flowering in potato, lettuce, spinach, cabbage, brussel sprouts, argula, kale collated, chard, beet, turnip, sweet potato and turf grass. Also the ribozymes can be used for RNA manipulation in the same way that restriction endonucleases are for RNA manipulation in the came way that restriction endonucleases are for DNA, as well as to examine
